Good Oats EVERY Year

Bad oats years are gone because today, right here at Hoffman's, is good, clean seed of strains bred to resist certain oats diseases . . . which often cause serious damage to otherwise good crops.

Tama and Vicland Oats

Have made great names for themselves on this important job. Please read catalog details. Their widespread record of good yields has caused a heavy call for Hoffman's seed of them. Mature early. Straw is stiff, not tall. Unsold supply is not large. Very quick orders urged.

Hoffman Victory Oats

Very popular through past 20 years. Tall straw. Vigorous grower. Heavy cropper. Good kernels. Thin hull. High feed value. Many times through the years have users reported gains of 10 to 20 bushels per acre over neighboring fields. Recommended as a dependable producer. Order today.

Swedish Type Oats

Always in demand among many Hoffman patrons. Ripens mid-season. Tree or sprangle type. Firm straw. Good root structure. Nice grain. Cost is very moderate—just a little over that of feed oats.

Order Ceresan

And treat your seed oats, barley, wheat with it. Easy to apply. Costs little. Helps to get extra bushels from every acre.

Ladino Clover

The wonder crop. Don't miss getting acquainted with it this year. Results from sowing just one single pound of Ladino seed to the acre will really surprise you. Here is splendid true strain Ladino seed. Please refer to Hoffman catalog for details—pages 4, 7, 18, 38, 39, 41. Strongly recommended. How much shall we mail you right away?

Renew Pastures Now

This spring is seeing a great increase in the use of Hoffman Pasture Grass seeds. Good seed, plus lime, fertilizer and good manage-

ment (refer to catalog) will greatly help improve needed pastures.

Better Get Your

Hoffman Rye Grass Now

U. S. Government has recently made large purchases for export. A definite shortage now seems possible. Include Rye Grass with your other seed order now. Be safe.

Hoffman Soy Beans

Big pick-up in demand past two weeks. Market stronger. Favorite hay beans are the Kingwa and Black Wilson type. Manchu type popular for bean production.

Sudan Grass

Consider using the three Hoffman types. (Catalog, page 43.) Try them all, compare results.

For Top Corn Crops

Funk G Hoffman seeds. Here you get the RIGHT strain. If you require some early corn ahead of your main crop . . . if part of your acreage must produce silage, other sections straight husking corn . . . if certain soils don't have quite the high fertility your other fields do . . . here are certain Funk G Hybrids ready to do those special jobs. Describe your special conditions on your Hoffman order blank . . . give all the facts . . . so the proper G Hybrid can be assigned.

All kernel-types of any Funk G Hybrid will produce exactly the same crop. Round-kernel seed does not produce round-grain corn, but just exactly the same fine ears as come from flat-kernel seed. Round-kernel seed costs less.

Here are some advantages you get from Hoffman Funk G seed:

- Great deep root systems.
- Wide leaves and lots of them.
- Strong stalks that stand up through to harvest.
- Wonderful disease resistance.
- Good ears. Easy to husk.
- Safe maturity.
- Deep kernels on thin cobs.
- REALLY GOOD crops to fill your corn crib and silo.
